FROM F. D. Hobbs *[Signature]*
SUBJECT DISCHARGE OF WATER FROM POND B-5

PondB5-Hobbs

Best Available Copy

Per telephone conversation between F. D. Hobbs, CWAP/ER, EG&G, and Mark Vanderpuy, DOE RFO on March 23, 1990, 11:30 a.m.:

The State's samples of treated water were assessed to meet standards and the release of water from Pond B-5 through the full treatment system (filtration and carbon) can commence effective immediately. The raw pond water is to be sampled for three consecutive days for gross alpha analysis. If the gross alpha results meet standards, the filtration can be reduced to 25 micron filters in parallel prior to the carbon units. Daily sampling will be collected for total suspended solid analysis. Weekly samples will be collected for gross alpha, gross beta, volatile organic compounds, atrazine, and total suspended solids analysis. Sampling will be performed for the duration of the discharge.
